- All in one cloud based 3-day health check.
- Fully automated
- Analysis reports
- Simple colour coded dashboard
- Contractor and equipment database
- Range of GSM options available
- Full Equipment healthcheck included

What is EN81-28 Healthcheck?

It is a requirement that all passenger lifts are fitted with lift alarm autodiallers to allow trapped passengers to call for help.

EN 81-28 requires that an autodialler healthcheck is carried out by the lift owner/ lift contractor every 3 days to provide information that the autodialler device and communication path are fully functional.

The Solution

CMS Anywhere 3-day healthcheck software provides a clever cloud- based solution that can automatically monitor our range of emFONE lift autodiallers.

To compliment the autodialler health check TVC also offer a range of GSM products some to provide a backup for a telephone line and some to provide the communication solely, TVC also offer SIM cards on a contract basis.

This offers a turnkey solution thus providing a peace of mind offering 24/7 365 that complies with EN81-28.

The simple dashboard allows you to quickly identify the health of all your lift autodiallers.

The healthcheck software will also check the health of the car speaker, car top unit and pit unit, this allows you to report any faults to your lift contractor as soon as they happen thus reducing downtime.
