- Compatible with EN81-28 2018

## Options

- Secondary, back-up SIM
- Wi-Fi module for remote wireless and IoT connectivity.
- Supply only or TVC supply and fit

## Autodialler and Data Dual Router

Our new 4G GPRS Dual-Router provides a single solution hub for the connection of multiple lift communication devices.

With a single SIM providing communication for devices including EMU monitoring units, emFONE autodiallers, Mercury information screens and CCTV, connecting and managing your lift devices couldn't be easier.

The Dual-Router also offers full communications peace-of-mind backup option with the addition of a secondary SIM to switch to should the primary communication network fail thereby providing reliable communication and keeping your lift in service.

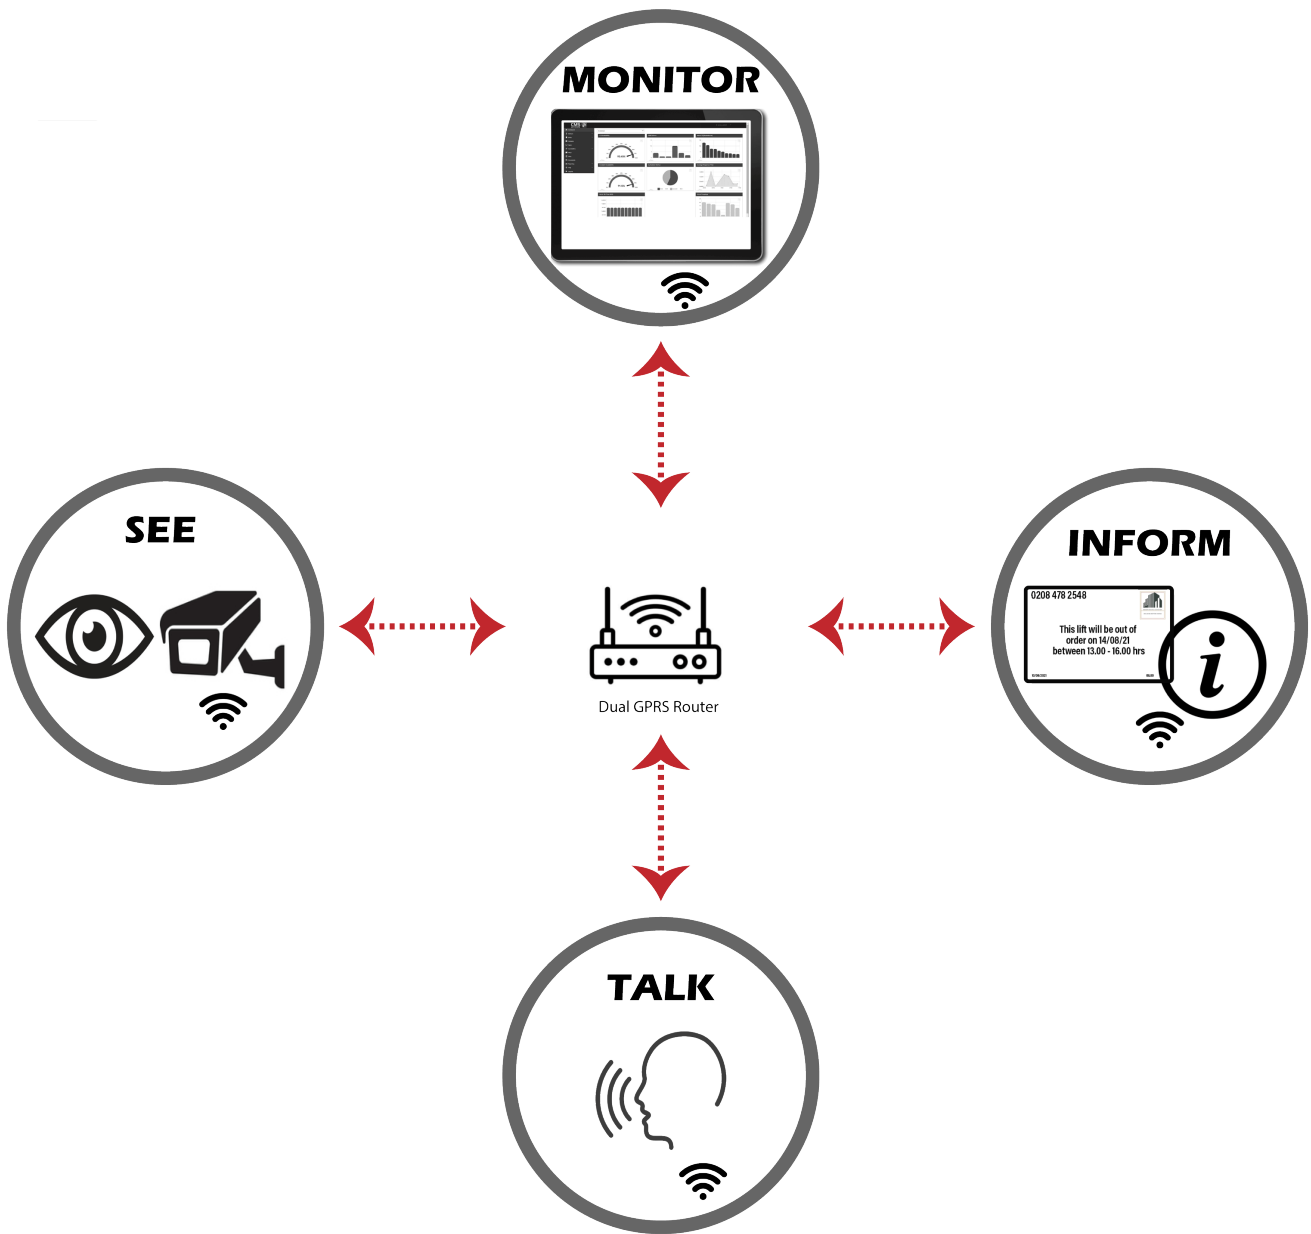

TVC offer this turnkey solution, pre-configured to work first time.

Supplied with a TVC managed SIM, no need for top-ups, no monthly billing and no emergency call charges; all are included within the annual normal-use contract\*.

With the removal of traditional copper telephone lines by Openreach there has never been a better time to switch to this one-stop solution and start saving on expensive line-charges.

\*Excessive data or extensive telephone calls are subject to an additional charge, see our terms and conditions for full details.
