# Ethos...
now even Smarter

Internet of Things

Now with IoT connectivity, the best-in-class Ethos lift controller is ready to integrate with Smart buildings.
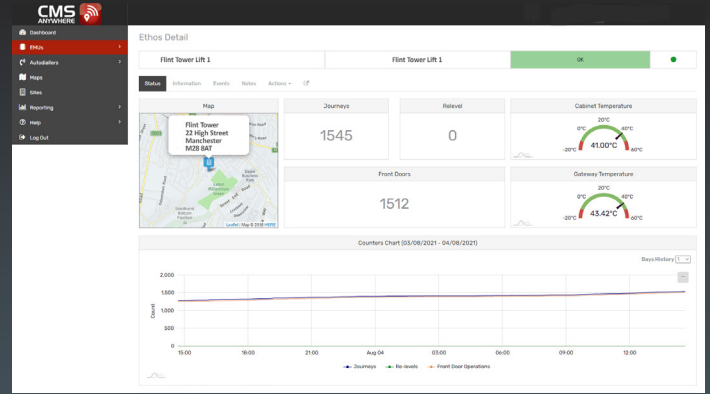

With the release of EMU Gateway, TVC brings to market the technology breakthrough of Ethos IoT to deliver unequalled monitoring performance and lift control.

FEATURES & BENEFITS

- Ethos IoT facilitates future-proof lift integration with Smart buildings.
- Safely access Ethos 2 control from anywhere in the world. Remotely monitor and manage the control system via password protected access for functions including floor isolation and entering calls
- Maximise maintenance efficiency by interrogating the lift status and verifying faults. Take the correct parts and send the right engineer. Lift-working-on-arrival is a thing of the past.
- Graphical real-time information options include speed, journeys, re-levelling, temperature and humidity.
- Lift journey, door operation and re-levelling counters.
- Graphical report shows a simple overview of each lift's journeys, re-levels, total count of doors
- Monitor the controller and EMU Gateway built-in temperature sensors
- Apps for Android and Apple allow you to login, and select reason for visit

Thames Valley Controls

ethos
Internet of Things

Remotely secure or restrict one or more floors easily from anywhere in the world. For instance, this can be used if a floor or number of floors need to be temporally restricted or need securing for a period of time and can be easily switched off by the touch of a button.
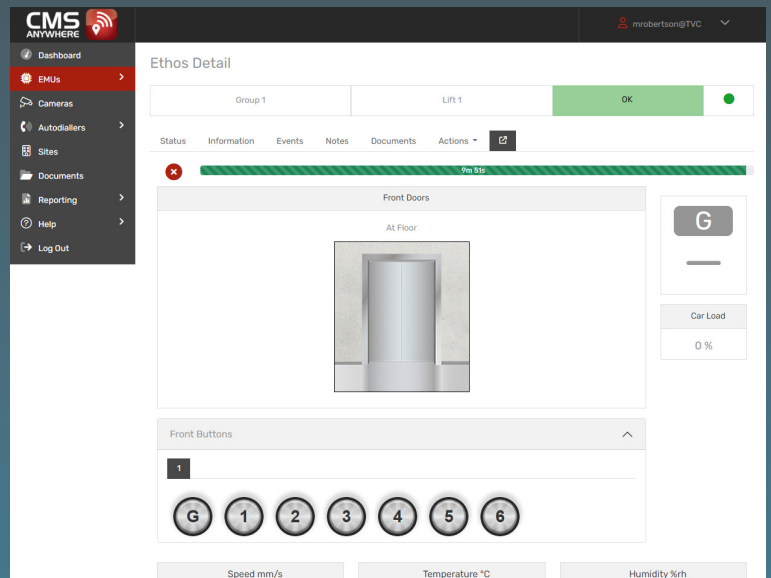

Displays the number of lift journeys, door operations and re- levelling events. Clear graphics display cabinet and EMU Gateway temperatures.
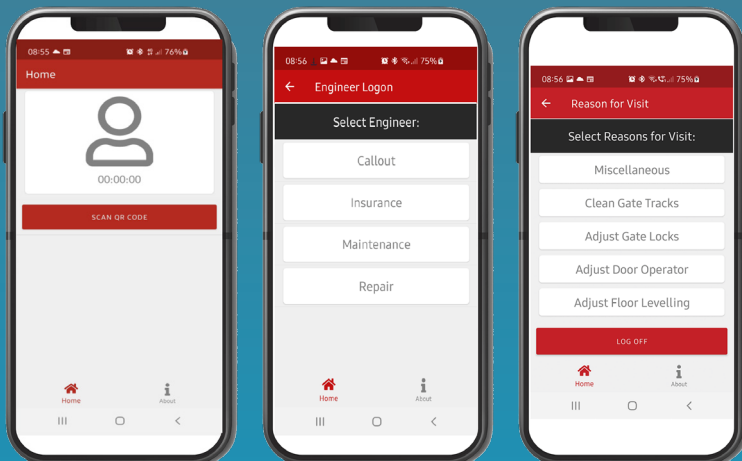

Data rich reports are displayed in simple graphical displays to quickly identify heavily used lifts and door operators.

Place calls on any floor from anywhere in the world via EMU Gateway. EMU Gateway allows you to remotely test floors and in addition allows you to remotely interrogate lift status and verify faults, reduce costly site visits by remote fault verification. Graphical real-time information includes speed, journeys, re-levelling, temperature and humidity plus many more

Free, downloadable Apps for both Android and Apple devices, allow you to logon, and select reason for visit.
